The Problem

Every engineering team struggles with the same chaos — scattered reports, missed SLAs, zero visibility.

Scattered Reports

Bugs via WhatsApp, email, Slack, spreadsheets — lost before anyone sees them

SLA Blindness

No deadline tracking. Critical bugs resolved days late. Zero warning.

Zero Visibility

CS reports a bug but never knows if it's been seen, assigned, or fixed

No Accountability

Who's overloaded? Who broke SLA? Zero history, zero audit trail

Tool Fragmentation

4 different tools, 4 logins — context lost everywhere

Multi-Brand Chaos

Managing issues across multiple clients from one place? Impossible

One Platform. Every Team. Every Issue.

Resolvo unifies issue tracking, AI triage, email ticketing, and analytics under one roof — for every team in your company.

Issue Tracking

SLA · Kanban · Sprints · AI triage

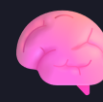

- ✓ Kanban + Sprints
- ✓ SLA timers
- ✓ Bulk actions
- ✓ Custom fields
- ✓ Post-mortems

Email Ticketing

Freshdesk-style inbox · Auto-resolve · CSAT

- ✓ Email → ticket auto
- ✓ Smart spam filter
- ✓ CSAT surveys
- ✓ Auto-resolve rules
- ✓ Reply from platform

AI Intelligence

Root cause clusters · Churn risk · Revenue impact

- ✓ Root cause AI
- ✓ Regression detector
- ✓ Revenue dashboard
- ✓ Customer health
- ✓ Predictive SLA

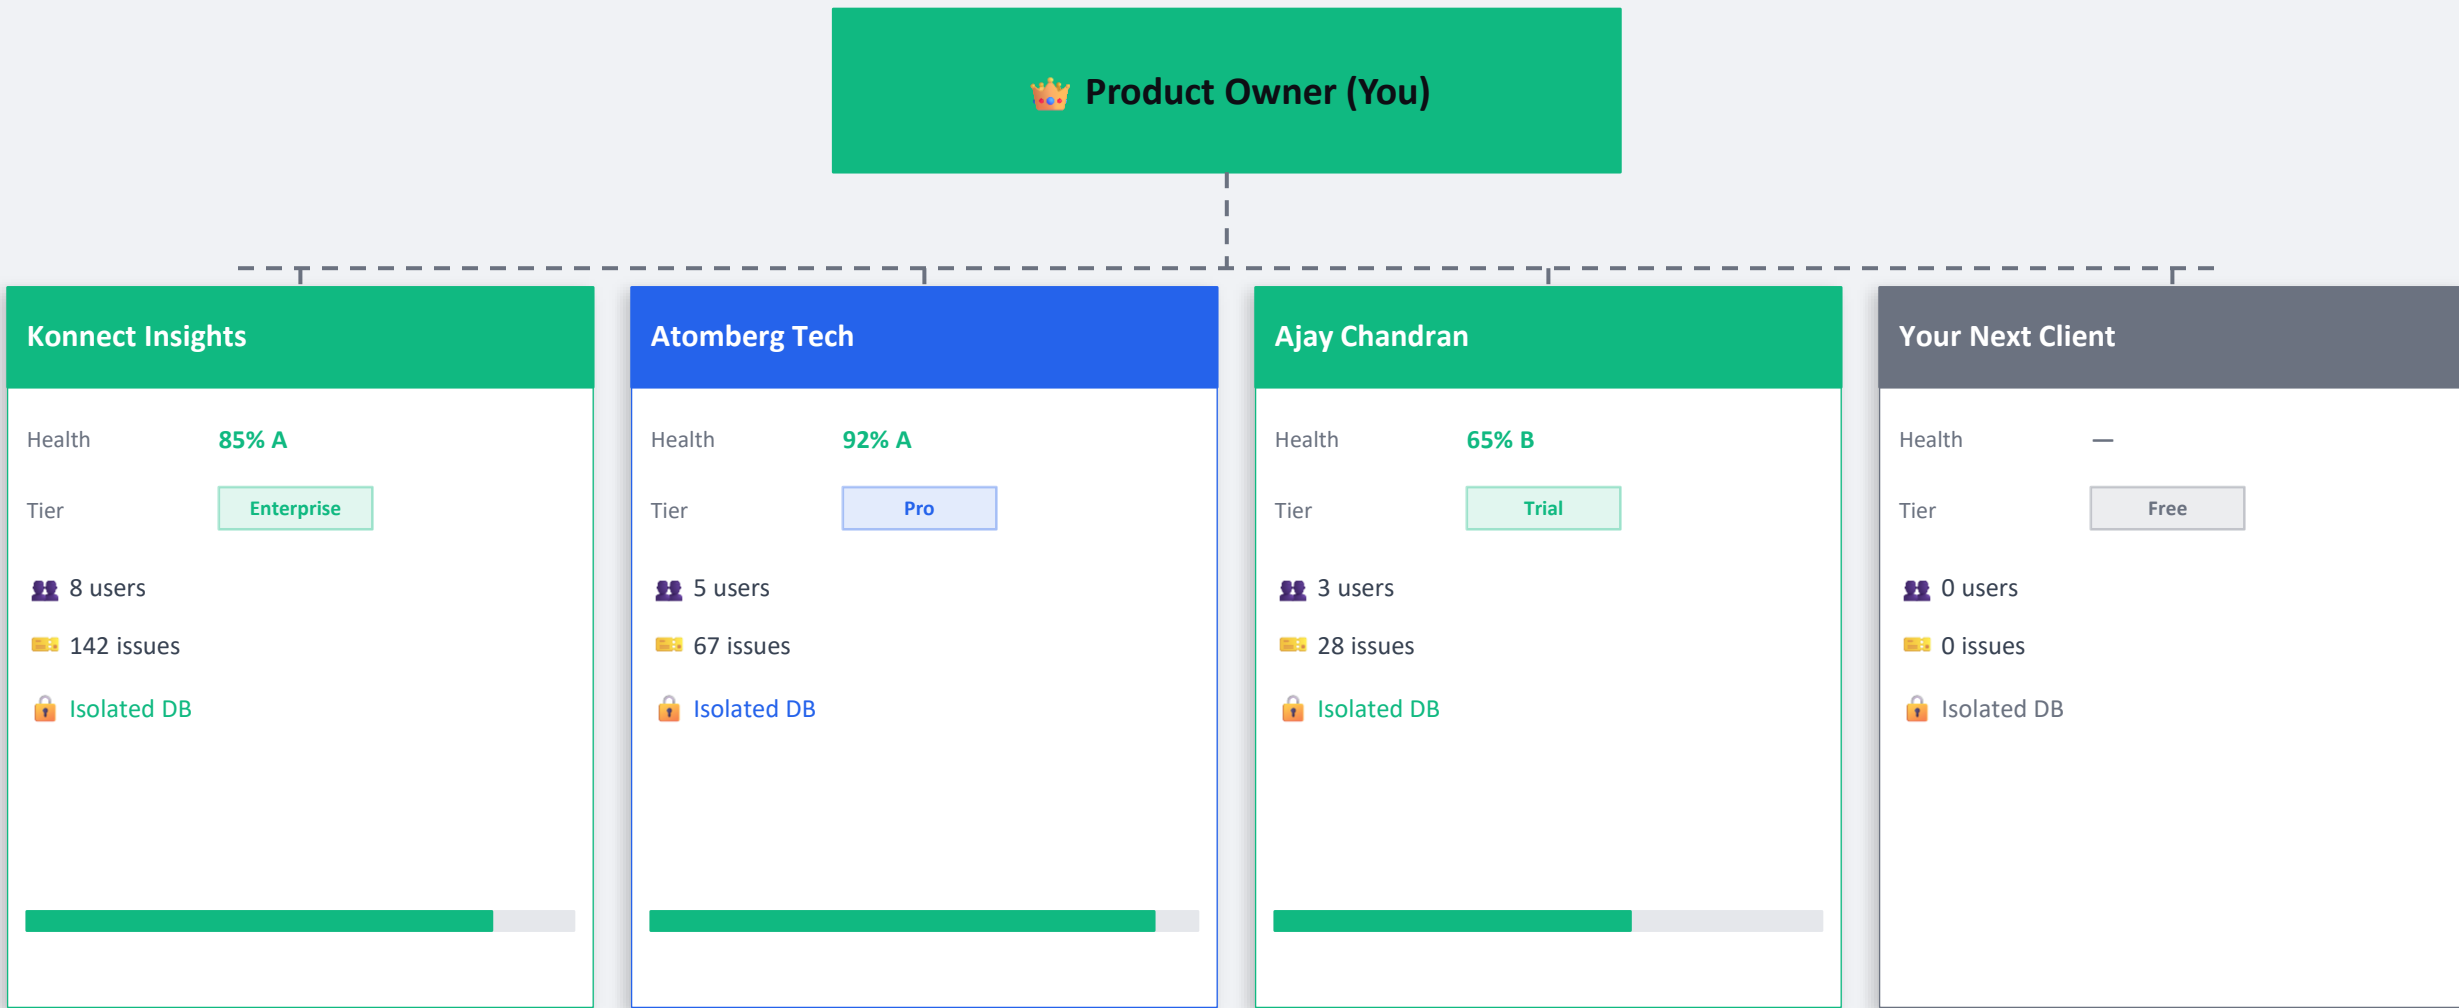

Analytics & Reports

MTTR · SLA compliance · User performance · CSV export

Multi-Tenant Architecture

One platform. Every company runs their own isolated workspace.

AI Intelligence Hub

Resolvo doesn't just track issues — it thinks about them for you.

Root Cause Clustering

Groups similar issues by root cause automatically. 'Login fails on Safari', 'Auth token expired', '2FA broken' → ONE cluster. Fix all at once.

Regression Detector

When a resolved issue comes back, Resolvo auto-flags it and links to the original: 'This looks like ISS-0089 from March — it's back.'

Predictive SLA Breach

Warns before breach happens: 'Dev A averages 18h on Medium issues. SLA is 24h. At current pace — breach probability: 78%.'

Revenue Impact Tracking

Tag issues with ₹ at risk. Dashboard shows total revenue exposed: '₹12.8L at risk across 5 open issues.'

Sentiment-Triggered Escalation

Detects angry customers from email language. Score <30 → auto-escalate to Critical. 'EXTREMELY FRUSTRATED' → immediate alert.

Customer Health Scores

Per-customer 0–100 health score from ticket patterns. Shows at-risk customers before they churn.

CSAT Surveys

Auto-send 1-5 star satisfaction survey after ticket resolves. Customer clicks an emoji. Track CSAT per agent, per module.

Zero-Touch Auto-Resolve

Configure rules: 'If subject matches Delivery Status Notification → auto-close, send reply.' No agent needed.

Email Ticketing — Built-In

A complete Freshdesk-style support inbox. No extra tool needed.

Support Inbox648 tickets

PENDINGMedium

Email → ticket automatically (any IMAP/Gmail)

AI sentiment detection auto-escalates angry customers

Smart spam filter blocks bounces & auto-notifications

Reply from platform → email sent back to customer

'Raise as Issue' links ticket to tech team issue

CSAT survey auto-sent after ticket resolved

Zero-touch auto-resolve for repetitive patterns

Analytics & Reporting — Full Visibility

Every team lead and admin gets real-time data to make faster decisions and prevent SLA breaches.

Issue Reports

- ✓ All issues by status & priority
- ✓ Module health scores
- ✓ Developer performance
- ✓ Aging & WIP analysis
- ✓ Export full CSV

SLA & Compliance

- ✓ SLA compliance rate (%)
- ✓ Breached issues history
- ✓ Resolution time trend
- ✓ Working hours config
- ✓ SLA predictor (AI)

User & Team

- ✓ Issues raised per user
- ✓ Issues resolved per user
- ✓ Avg resolution time
- ✓ SLA compliance per user
- ✓ Time logged per task

Email Tickets

- ✓ Tickets by status chart
- ✓ Avg first response time
- ✓ Resolution rate %
- ✓ Top senders heatmap
- ✓ 30-day volume trend

50+ Features. Day One. No Setup.

Everything ships out of the box. No plugins. No configuration marathon.

Issue Tracking + SLA

Full lifecycle with configurable SLA timers per priority

Kanban Board

Drag-and-drop with SLA badges and age indicators

Sprint Planning

Burndown charts, velocity tracking, story points

AI Triage (Gemini)

Smart priority, module, impact suggestions

Analytics Suite

MTTR, SLA compliance, module health, workload

Email Ticketing

Full Freshdesk-style inbox with conversation threads

Root Cause AI

Group similar issues by root cause automatically

Revenue Impact

Tag issues with ₹ at risk — dashboard shows exposure

Customer Health

Per-email health score from ticket patterns

Reports (4 types)

My issues, All issues, User performance, Email stats

Feature Flags

Enable/disable any feature per brand per tier

API Integrations

Jira, ServiceNow, GitHub, custom REST API

Public Status Page

/status shows live health to customers

Enterprise Security

bcrypt, rate limiting, session expiry, audit trail

Post-Mortem Reports

AI-generated incident reports one click

Teams + On-Call

Organise users into teams, define on-call rotations

Built for Every Team

Not just developers. Every person who touches a customer problem.

Engineering

- ✦ Create & own issues
- ✦ Kanban + Sprint workflow
- ✦ AI smart triage
- ✦ SLA timers + breach alerts
- ✦ Git commit linking

CS / Support

- ✦ Report bugs from clients
- ✦ Email ticket inbox
- ✦ Track resolution status
- ✦ CSAT surveys
- ✦ Full conversation history

QA / Testing

- ✦ Create test-fail issues
- ✦ Peer review workflow
- ✦ Custom fields for test data
- ✦ Linked dependencies
- ✦ Module health scores

Sales

- ✦ Report deal-blocking bugs
- ✦ Priority escalation
- ✦ Revenue impact tagging
- ✦ Status page to share
- ✦ Customer health visibility

Product

- ✦ Feature request tracking
- ✦ Sprint planning + velocity
- ✦ Release notes (AI-gen)
- ✦ Post-mortem reports
- ✦ Analytics dashboards

Connects to Your Entire Stack

Push issues to Jira, sync with GitHub, trigger Slack alerts, let AI triage — all automatic.

Jira

2-way sync

Auto-create Jira issues on new ticket. 2-way sync via Atlassian API.

GitHub Issues

commit linking

Push tickets as GitHub issues. Link commits to issues.

ServiceNow

ITSM

Auto-create incidents in ServiceNow with urgency mapping.

Slack

real-time

Instant webhook alerts for critical issues and SLA breaches.

Gmail / SMTP

notifications

Beautiful HTML email notifications via Nodemailer.

Google Gemini

AI

AI triage, comment summaries, daily standup digests.

Custom REST

enterprise

Push to any internal API with configurable endpoint + auth.

Webhooks/Zapier

automation

Trigger n8n, Zapier, or any automation on issue events.

Enterprise-Grade Security

Your data is isolated, encrypted, and protected at every layer.

bcrypt Passwords

Encryption

All passwords hashed with bcrypt (cost 10). Zero plain-text credentials ever stored.

Rate Limiting

Auth

5 login attempts per IP per 15 minutes. Brute-force attacks blocked at the API.

Session Expiry

Sessions

Sessions expire in 8h (30d with Remember Me). Force-logout any session from Owner Portal.

Data Isolation

Multi-tenant

Each brand's data in a separate JSON file. Cross-brand access is architecturally impossible.

Audit Trail

Compliance

Every action logged with user, timestamp, issue ID. Full activity history for compliance.

Maintenance Mode

Operations

Owner can put the platform in maintenance mode instantly. Custom message shown to all users.

Simple, Transparent Pricing

Start free. Scale when you need to. Each brand billed separately.

Free	ProMOST POPULAR	Enterprise
